Continuing the North Sea Journey

Solan Subsea Storage

Marcos Monteferrante

Operated Assets Lead Petroleum Engineer, Premier Oil

The Solan Oil Field is located offshore in the hostile north Atlantic approximately ≈ 135 km west of the Shetland isles and ≈ 135 metres water depth. Solan commenced production in April 2016 comprise 4 subsea wells (2 producers-2 injectors) tied back to a single slim jacket with essential process facilities topside. The development includes several innovative features which enables full remote control from an onshore control room in Aberdeen. One of the most novel feature was the construction of a subsea storage oil tank (SOST), located ≈ 300 metres from the platform, with the aim to provide operational flexibility for such a remote harsh weather installation. The concept selection, design, fabrication, installation and operation are the subject of this presentation.

Note:

Tickets booked less than 24 hours before the event or at the door will incur a £5 supplement charge.

No student rate at the door.

COST

SPE/EI MEMBERS £20

NON MEMBERS £25
