

The logo for TEXO, featuring the word in a bold, white, sans-serif font. The letter 'X' is stylized with an orange triangle pointing downwards from its top right corner.

TEXO

Creating tangible value across sectors and reducing decommissioning liabilities and risk by repurposing an existing large scale accommodation unit into a plug and play medical centre.

Imagination

Reality

The Challenge

- 1,200 Tonne dormant asset sitting at the quayside for over 10 years
- A region in South America who were needing to build a hospital
- The asset was not suitable for re-use offshore
- A significant decommissioning and disposal cost was imminent
- TEXO people had an intimate knowledge of the asset as a number of the team were involved in the original build
- How do we find a new home rather than scrap?

The Solution

- TEXO's network across different sectors identify a potential requirement
- TEXO and partners broker a discussion between interested parties
- TEXO utilize our LiveStream and TexZone capabilities to share live footage and detailed drawings to highlight the value proposition
- Multi-national negotiations take place during a global pandemic to agree arrangements
- TEXO Workspace Solutions prepare the asset internally and ready for shipment
- TEXO Port Services mobilise the asset for shipment
- An asset is repurposed, a region has a functioning hospital with a helipad and the world has one less environmental challenge
