Topsides UK continues to bring together industry bodies, operators, supply chain and contractors to share knowledge, pain points, solutions, and innovations.

According to the North Sea Transition Authority, Government forecasts show that oil and gas will remain an important part of the energy mix for the foreseeable future, including under net zero.

TECHNICAL PROGRAMME

It is estimated that Oil and Gas will still be ~50% of the global energy mix by 2050.

The oil and gas industry continues to play a hugely important part in the energy transition both globally and locally. At the same time, we are looking to maximise economic recovery and run safe, efficient, reliable and cost-effective operations.

The focus remains on key areas such as; maintenance (both safety and business critical), asset integrity, reducing emissions (including methane), project / shutdown delivery, innovations in the way we operate as reservoirs decline, efficient decommissioning strategy, people skills etc, all while preserving our security of supply. This is the very real challenge that our topsides community must face together.
